## **SUMMARY**

In January 2018, Maxxam Analytics was contracted to manage the ambient air quality monitoring and maintenance activities at the Three Creeks 986b Station, near Peace River Oil Sands Area 2, Alberta. The monitoring station provides continuous meteorological measurements and air quality data for compliance parameters, as requested by the PRAMP Committee.

All data collected this month was compliant with the requirements outlined in the Air Monitoring Directive (Alberta Environment and Parks, 2016).

The operational time for all continuous ambient air analyzers, meteorological systems and data acquisition systems were above the 90% requirement.

**Data Logger:** On January 16, an alternate data logger (Ultimate) was installed at the station. The Ultimate data logger is currently running in parallel with the resident (ESC) data logger for assessment, pending its transition to the primary data logger. One or two hours of downtime were recorded across all parameters as a result.

The summary of results is presented on the following pages.

Any deviations or modifications made to the sampling or analytical methods are outlined in Section 1.0, Discussion. On this basis, Maxxam Analytics is issuing this completed report to Peace River Area Monitoring Program Committee, Three Creeks 986b Station.

Should you have any questions concerning the results or if we can be of further assistance, please contact us at 403-219-3661 or toll-free at 1-800-386-7247.

## **1.0 Discussion**

This monthly report consists of continuous monitoring results for the following parameters: Sulphur Dioxide (SO<sub>2</sub>), Total Reduced Sulphur (TRS), Total Hydrocarbon (THC), Methane (CH<sub>4</sub>), Non-Methane Hydrocarbon (NMHC), Relative Humidity (RH), Barometric Pressure (BP), Ambient Temperature (AmbTPX), Station Temperature (StnTPX), Wind Speed (WS) and Wind Direction (WD).

The sample inlet filter for all continuous air analyzers are replaced before the calibration begins. The sample manifold is cleaned during the site visit each month.

Control checks, consisting of a zero and span, are conducted daily on all continuous air monitors. In place of the air sample, zero air (from scrubbed air or gas cylinders) is used for zero checks, and a known concentration of the pollutant being analyzed is used for span checks. These checks are controlled by automatic timers and valves. The total zero span cycle is completed within an hour, the commencement of the zero span cycle is at the beginning of the hour.

Multipoint calibrations are done a minimum of once a month for each continuous air monitor. An additional calibration is required under the following conditions: 1) within three days after the initial start-up and stabilization of a newly installed instrument, 2) prior to shut-down or moving of an instrument which has been working to specification, and 3) when major repair has been done on the instrument.

Time during the first multi-point calibration is not considered downtime (Data is flagged as C). If more than one calibration is performed during the month, the time during the additional calibration is considered as downtime (Data is flagged as C1).

Only one zero/span check is run per day. Time during the zero/span check is not considered as downtime (Data is flagged as S). If an extra zero/span check is performed, the time during the additional check is considered as downtime (Data is flagged as S1).

The AMD requires each instrument and accompanying data recording system to be operational 90% of the time, at a minimum, for each monthly monitoring period.

All sampling, analysis, and QA/QC for this project was performed by Maxxam Analytics and complies with the Alberta Air Monitoring Directive.

Data contained in this monthly report has undergone the verification and validation based on the requirements of the AMD Chapter 6: Ambient Data Quality (December, 2016). The descriptions of the data verification and validation process can be found in Section 5 of this report. Instantaneous data, where applicable, is provided for reference purposes and has not undergone zero correction. The minimum and maximum statistics are highlighted in the data table and are for reference only. The highlighted cells are based on the software's interpretation of the exact position of the minimum or maximum value. The visual presentation of these statistics may not be the obvious choice in a data range due to rounding, truncating or analyzer specifications.

Hourly/minute data have been reviewed based on daily zero/span results and multi-point calibration results. Data may be considered invalid if a zero-corrected span check in excess of +/- 10% of the span concentration (established by the previous multi-point calibration) is encountered and/or significant differences in the calibration factor occurs (greater than 10%).

#### **SULPHUR DIOXIDE (SO<sub>2</sub>)**

- Operational time, for the monitoring period was 99.7%, equivalent to two hours of downtime.
- The routine monthly calibration was performed on January 11.
- On January 16, an alternate datalogger (Ultimate) was installed and tested on the channel. Two hours of downtime were recorded at hours 16:00 and 19:00 as a result. The Ultimate data logger is currently running in parallel with the resident (ESC) data logger for assessment, pending its transition to the primary data logger.

#### **TOTAL REDUCED SULPHUR (TRS)**

- Operational time, for the monitoring period was 99.7%, equivalent to two hours of downtime.
- The routine monthly calibration was performed on January 11.
- On January 16, an alternate data logger (Ultimate) was installed and tested on the channel. Two hours of downtime were recorded at hours 17:00 and 19:00 as a result. The Ultimate data logger is currently running in parallel with the resident (ESC) data logger for assessment, pending its transition to the primary data logger.

#### **TOTAL HYDROCARBONS (THC), METHANE (CH<sub>4</sub>) and NON-METHANE HYDROCARBONS (NMHC)**

- Operational time, for the monitoring period was 99.9%, equivalent to one hour of downtime.
- The routine monthly calibration was performed on January 11.
- On January 16, an alternate datalogger (Ultimate) was installed and tested on the channel. One hour of downtime was recorded at hour 19:00 as a result. The Ultimate data logger is currently running in parallel with the resident (ESC) data logger for assessment, pending its transition to the primary data logger.
- The canister sampler is programmed to draw in a whole air sample when the 5-minute average concentration of NMHC is above 0.30 ppm. A representative sample of ambient air is collected over a one-hour period when the canister event is triggered. No canister event was recorded this month.

#### **WIND SPEED (WS) and WIND DIRECTION (WD)**

- Operational time, for the monitoring period was 99.9%, equivalent to one hour of downtime.
- On January 16, an alternate datalogger (Ultimate) was installed and tested on the channel. One hour of downtime was recorded at hour 19:00 as a result. The Ultimate data logger is currently running in parallel with the resident (ESC) data logger for assessment, pending its transition to the primary data logger.
- Wind data is reported as vector wind speed and vector wind direction. Wind direction is defined as the direction from which the wind is blowing from and is measured in degrees from true north.

#### **RELATIVE HUMIDITY (RH)**

- Operational time, for the monitoring period was 99.9%, equivalent to one hour of downtime.
- On January 16, an alternate datalogger (Ultimate) was installed and tested on the channel. One hour of downtime was recorded at hour 19:00 as a result. The Ultimate data logger is currently running in parallel with the resident (ESC) data logger for assessment, pending its transition to the primary data logger.

#### **BAROMETRIC PRESSURE (BP)**

- Operational time, for the monitoring period was 99.9%, equivalent to one hour of downtime.
- On January 16, an alternate datalogger (Ultimate) was installed and tested on the channel. One hour of downtime was recorded at hour 19:00 as a result. The Ultimate data logger is currently running in parallel with the resident (ESC) data logger for assessment, pending its transition to the primary data logger.

---

**AMBIENT TEMPERATURE (AmbTPX)**

- Operational time, for the monitoring period was 99.9%, equivalent to one hour of downtime.
- On January 16, an alternate datalogger (Ultimate) was installed and tested on the channel. One hour of downtime was recorded at hour 19:00 as a result. The Ultimate data logger is currently running in parallel with the resident (ESC) data logger for assessment, pending its transition to the primary data logger.

**STATION TEMPERATURE (StnTPX)**

- Operational time, for the monitoring period was 99.9%, equivalent to one hour of downtime.
- On January 16, an alternate datalogger (Ultimate) was installed and tested on the channel. One hour of downtime was recorded at hour 19:00 as a result. The Ultimate data logger is currently running in parallel with the resident (ESC) data logger for assessment, pending its transition to the primary data logger.

---

## **2.0 Project Personnel**

Karla Reesor was the contact for Peace River Area Monitoring Program Committee and the Maxxam field technician was Limin Li.

## **3.0 Plant Monthly Required AMD Summary**

All data collected this month was compliant with the requirements outlined in the Air Monitoring Directive (Alberta Environment and Parks, 2016).

The operational time for all continuous ambient air analyzers, meteorological systems and data acquisition systems were above the 90% requirement.

## **4.0 Calculations and Results**

All calculations and reporting of results follow the methods described in the AMD, 2016.

## 5.0 Methods and Procedures

The following methods and procedures were used to complete the monitoring program:

Maxxam AIR SOP-00001: Methane, Non-Methane Hydrocarbon Analyzer Monitoring

Maxxam AIR SOP-00208: RM Young Wind Monitor Calibration

Maxxam AIR SOP-00209: Ambient Sulphur Monitoring

There were no deviations from the prescribed methods.

The following instruments were used to perform the test program:

Sulphur Dioxide - Thermo 43C UV Fluorescent Analyzer

Total Reduced Sulphur - Thermo 43i - TLE UV Fluorescent Analyzer

Methane, Non-Methane Hydrocarbon - Thermo 55i FID Analyzer

Wind System - RM Young Unit

Relative Humidity - RM Young Unit

Barometric Pressure - Met One Unit

Ambient Temperature - RM Young Unit

Datalogger - ESC 8832

The following steps were used to complete the data verification and validation process:

**Level 0 Preliminary Verification**

Level 0 data are raw data obtained directly from the data acquisition system (DAS). Under the step of Level 0, these data undergo a certain amount of manual or automated screening and flagging. It included a) identification of periods of missing data; b) verification of time stamps against reference time; c) verification that instrument diagnostics/datalogger flags indicate normal operation; d) comparison of data to upper and lower limits; e) rate of change flagging indicating that data changed too rapidly or not at all; and f) verification that zero, span and multipoint performance checks are within specifications. This level of verification is performed on a daily basis.

**Level 1 Primary Validation**

Validation actions under the step of Level 1 include a) review of all screening flags assigned during preliminary verification; b) review of all supporting site information and documentation; c) review of operational acceptance limits for each parameter/analyzer; d) review of daily zero/span and monthly calibration results for all gaseous parameters; and e) application of any necessary adjustments to data (e.g. baseline adjustments, below zero adjustments). This level of validation is performed on a monthly basis.

**Level 2 Final Validation**

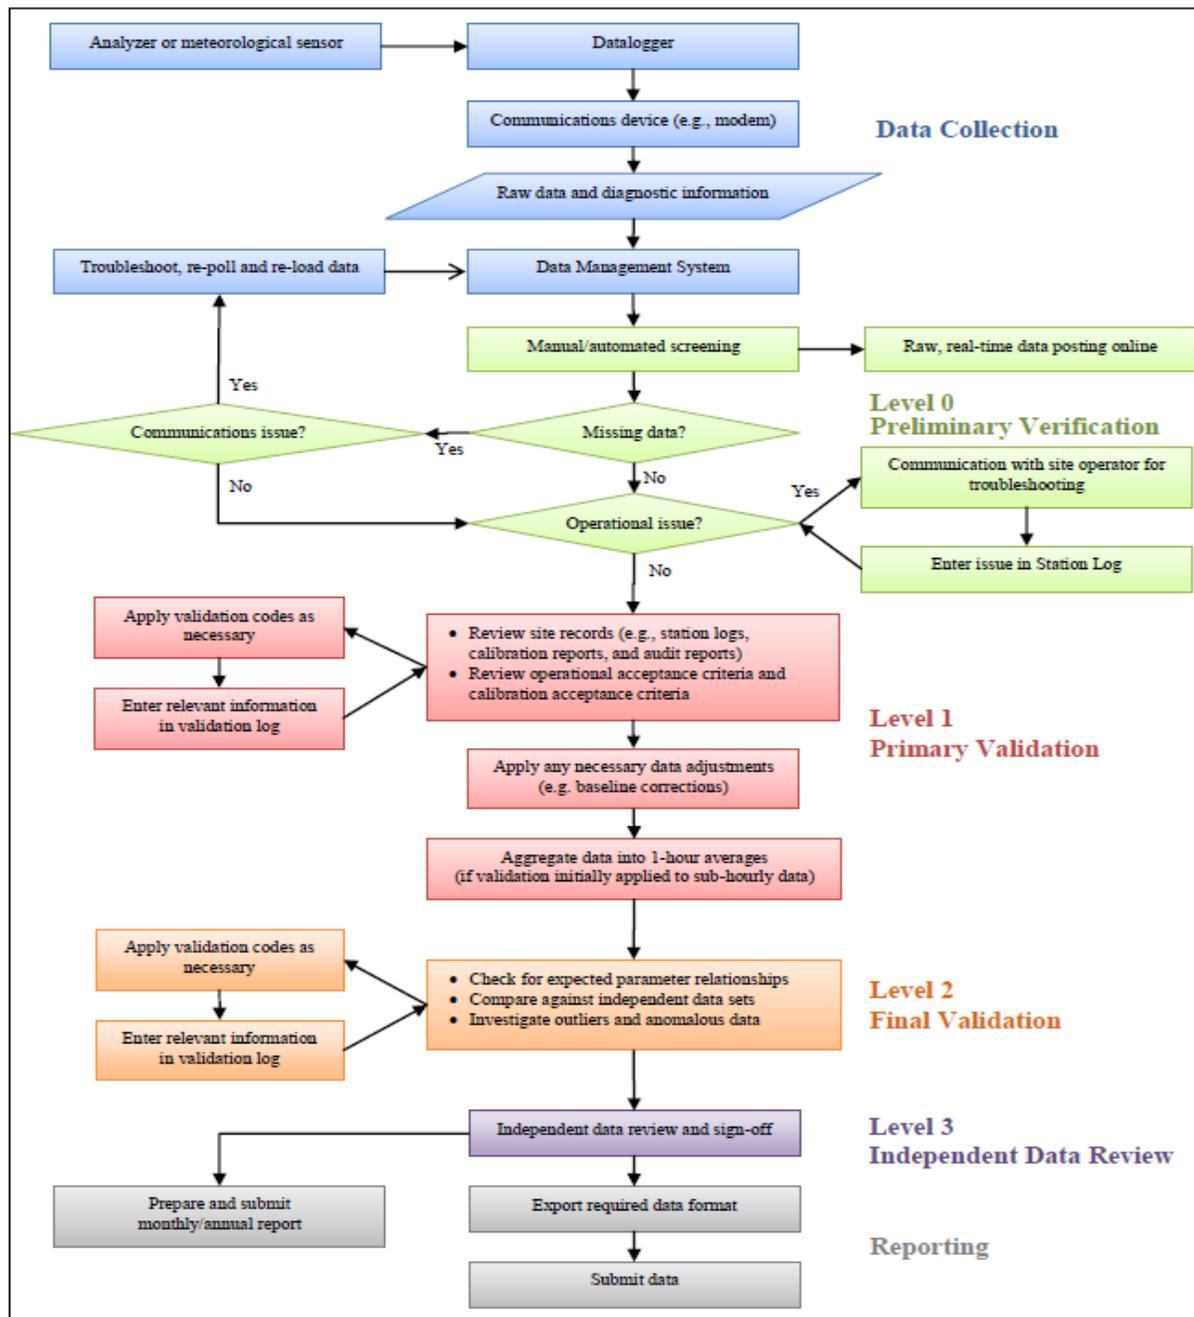

The purpose of Level 2 validation is to verify that there are no inconsistencies among related data, or among regional data measured at nearby sites.

**Level 3 Independent Data Review**

Level 3 validation is the last step of data review, and it is completed by an individual that is independent of both field operations and primary data validation. A final independent QA review and endorsement is performed during this step before data is submitted to Alberta Environment.

**Post-Final Validation**

The Post-Final Validation step serves to re-evaluate the data that errors or omissions are discovered and/or suspected after the initial submittal of data. Any data issues or patterns which were not clear on a monthly basis are highlighted during this step. This validation is performed on an annual basis.

--	--

**Comments:**

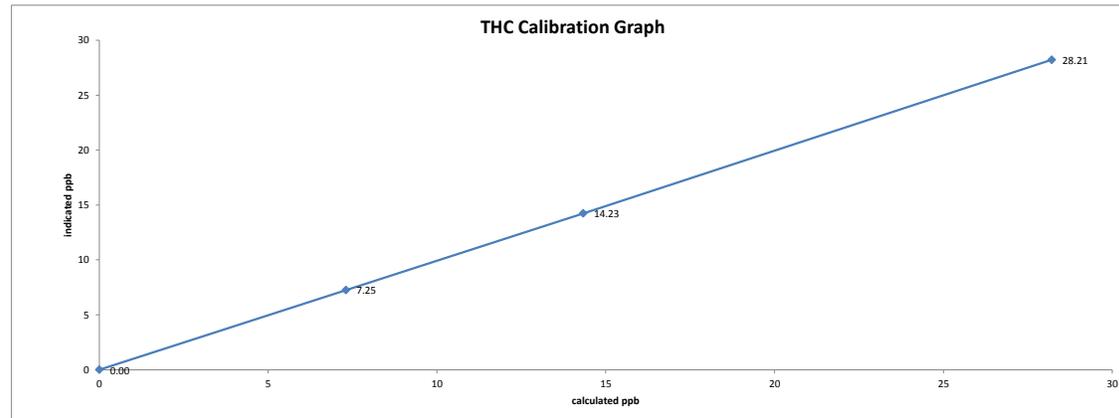

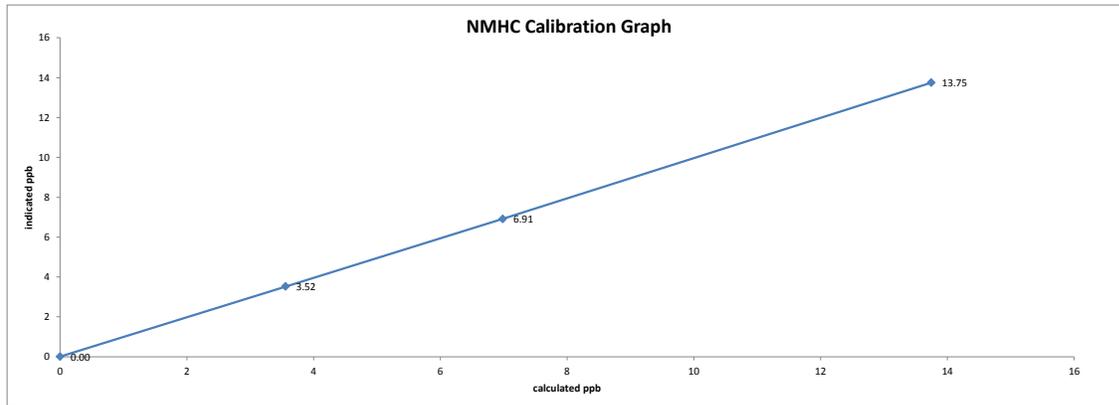

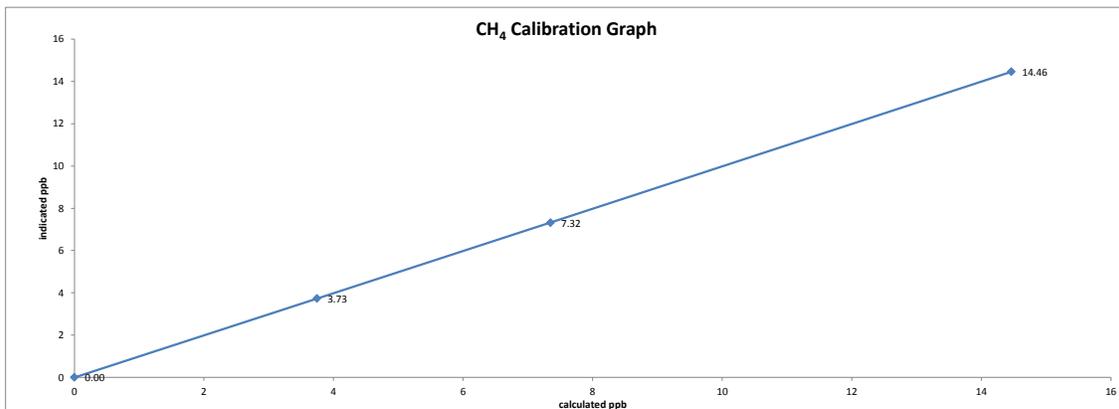

The analyzer sample inlet filter was changed. A new nitrogen cylinder was installed.

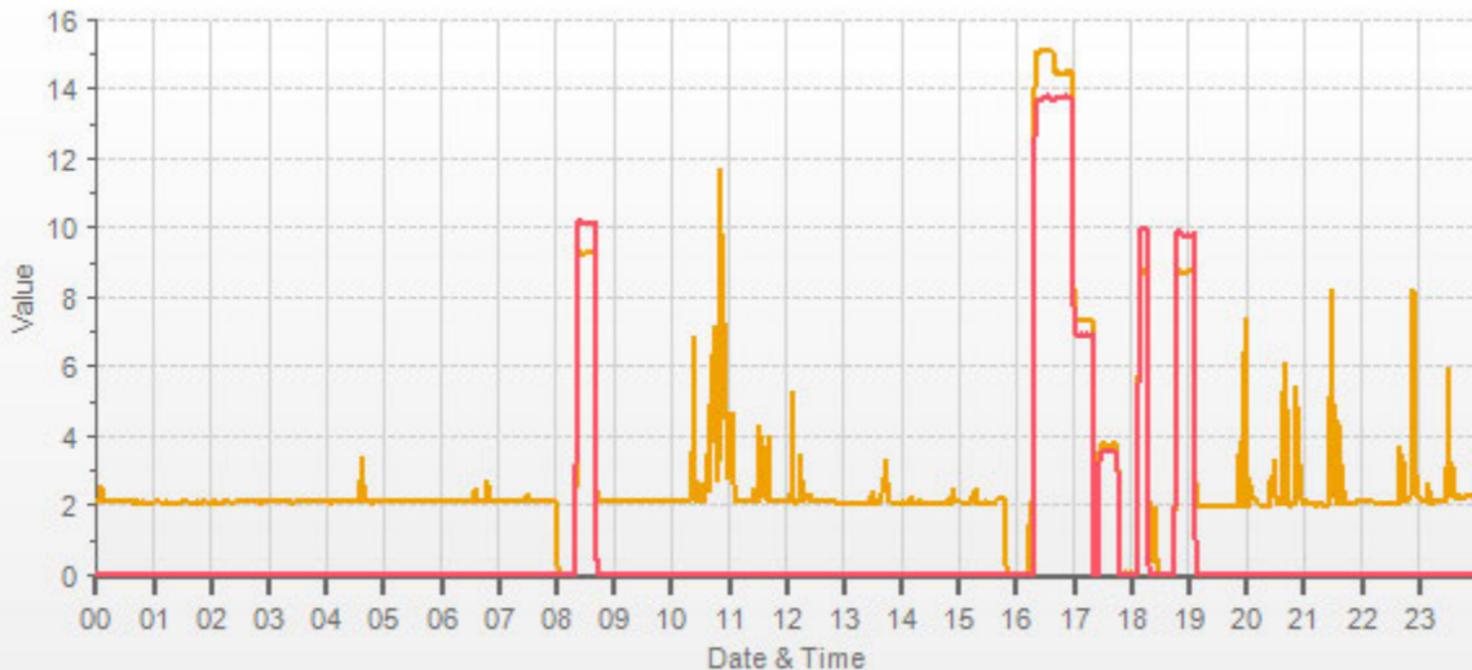

The analyzer cooling fan filter(s) were cleaned. No zero adjustment was required/made. As found zero values were copied to adjusted zero values for linearity calculation purposes.

The manifold blower was found to be working normally.

STATUS FLAG CODES

C	- MONTHLY CALIBRATION	Q	- QUALITY ASSURANCE
C1	- REPEAT CALIBRATION	R	- RECOVERY
Y	- MAINTENANCE	X	- MACHINE MALFUNCTION
S	- DAILY ZERO/SPAN CHECK	G	- OUT FOR REPAIR
S1	- REPEAT ZERO/SPAN CHECK	P	- POWER FAILURE

MONTHLY SUMMARY

NUMBER OF NON-ZERO READINGS:	706
MAXIMUM INSTANTANEOUS VALUE:	30.04 ppm @ HOUR 2 ON DAY 5
IZS CALIBRATION TIME:	32 hrs
MONTHLY CALIBRATION TIME:	5 hrs
OPERATIONAL TIME:	743 hrs
STANDARD DEVIATION:	3.69
