Monitoring Notes during the Month of January 2023

986-C Station

- Measured parameters were below Alberta Ambient Air Quality Objectives (AAAQOs) where applicable.
- All data collected this month were compliant with the requirements outlined in the AMD 2016.
- All parameters met the 90% operational uptime requirement, except RH (6.9%), AT (43.8%) and precipitation (55.1%).
- **RH/AT:**

- High RH values were recorded, starting in late December 2022. The probe was examined and cleaned on January 5, but it had only a temporary effect on readings.
- On January 12, the Rotronic HC2-S3 RH/AT sensor, s/n: 20357528, was removed, and the Rotronic HC2-S3 RH/AT sensor, s/n: 60837897, was installed. Data were reviewed and discarded if readings were recorded near or at 100%. Forty-six hours and two hundred seventy-five hours of data recorded in December 2022 and January 2023 were invalidated due to this issue.
- The probe failed on January 14 due to a broken connector. Data collected between January 14 and January 31 were discarded. Four hundred seventeen hours of data were invalidated.
- **Precipitation:** The precipitation gauge was found to be non-functional; the tipping bucket and drain holes were blocked by ice on January 12. The problem could not be corrected during the visit with the equipment available. Data were invalidated back to the last valid value, which was December 28, 2022 hour 7, to January 14 hour 21 before a valid reading started being recorded. Eighty-nine and three hundred thirty-four hours of data collected in December 2022 and January 2023 were discarded, respectively.

842-B Station

- Measured parameters were below Alberta Ambient Air Quality Objectives (AAAQOs) where applicable.
- All data collected this month were compliant with the requirements outlined in the AMD 2016.
- All parameters met the 90% operational uptime requirement.
- No major operational issues were recorded this month.

Reno-B Station

- Measured parameters were below Alberta Ambient Air Quality Objectives (AAAQOs) where applicable.
- All data collected this month were compliant with the requirements outlined in the AMD 2016.
- All parameters met the 90% operational uptime requirement, except precipitation (46.4%).
- **Precipitation:** The precipitation gauge was found to be non-functional on January 6; the tipping bucket and drain holes were blocked by ice. The problem could not be corrected during the visit with the equipment available. The precipitation gauge was de-iced and successfully tested to show correct function on January 17. Data were invalidated back to the last valid value, which was December 30, 2022 hour 12. Thirty-six and three hundred ninety-seven hours of data collected in December 2022 and January 2023 were discarded, respectively.
- **THC/CH4/NMHC:** To address bad injection issues, the PRAMP-owned Thermo 55i HC analyzer, s/n: 12101910497, was removed, and the BV-supplied Thermo 55i HC analyzer, s/n: 1505664392, was installed on January 17.

PRC Station

- Measured parameters were below Alberta Ambient Air Quality Objectives (AAAQOs) where applicable.
- All data collected this month were compliant with the requirements outlined in the AMD 2016.
- All parameters met the 90% operational uptime requirement.
- **All parameters:** The PRAMP-owned Ultimate datalogger, s/n: ACK7004200, failed on January 3. The BV-supplied Ultimate datalogger, s/n: ACI4000637, was installed on January 5. Fifty-eight hours of data were lost due to this event.

AQHI – Grimshaw Station

- All data collected this month were compliant with the requirements outlined in the AMD 2016.
- All parameters met the 90% operational uptime requirement.
- Measured parameters were below Alberta Ambient Air Quality Objectives (AAAQOs) and /or Alberta Ambient Air Quality Guidelines (AAAQGs) where applicable, except PM2.5. **Alberta EPA reference number: 408778.**
- **PM2.5:** One 24-hour exceedance was recorded on January 17, at concentration of 38.9 ug/m3. The cause for the exceedance was because of stagnant weather conditions. The stagnant episode was marked by sustained low wind speeds which hindered the dispersion of pollutants causing them to become built-up in the area.

VOCs Canister Sampling Program

- The canister sampling program collects a 1-hour sample of air when the continuously measured non-methane hydrocarbon (NMHC) concentration reaches a specified trigger point. The current trigger point is 0.3 ppm for non-methane hydrocarbons. The trigger point is based on real-time monitoring data that are averaged over a 5-minute period.
- The canister sample collection systems are in place at Station 986c, 842b, and the Reno Station; a canister sample collection system is not part of the suite of instruments currently deployed at both the PRC station and the AQHI-Grimshaw station.
- Sample analysis and analytical results were prepared and provided by InnoTech Alberta.
- One NMHC canister event was recorded at the Reno station this month.

Revisions to Alberta's Ambient Air Quality Data Warehouse

High relative humidity values were recorded at the 986-C station in late December 2022. Data were reviewed and compared with data collected by nearby stations. It was determined data collected between December 30, 2022 hour 7 and January 12 hour 10 were considered invalid and discarded even though the probe passed the January 12's removal audit. Forty-six hours of data recorded in December 2022 were invalidated due to this issue. The revised data were submitted to the ETS on February 26, 2023 (Request #: 4519849).

Deviations from Authorized Monitoring Methods

No deviations from authorized monitoring methods were recorded this month.

Disclaimer

Baseline corrections were performed on the 1-minute data. 5-minute and hourly data were calculated based on the post-baseline correction 1-minute data set. Data verification/validation were then performed on the 5-minute and hourly data. Hourly data that are included in this report are the post-validation hourly data set.

Equipment calibration / maintenance records were provided by Bureau Veritas.

Certification

This report was prepared and submitted by Lily Lin in accordance with Chapter 9 of the Air Monitoring Directive (AMD 2016).

Alberta Ambient Air Quality Objectives (AAAQOs) and/or Alberta Ambient Air Quality Guidelines (AAAQGs) Exceedances

The following exceedances of AAAQOs were observed at the AQHI - Grimshaw Station.

Date	Time (MST)	Parameter	Average Period	AAAQOs / AAAQGs	Concentration	Wind speed	Wind Direction	Reference #
January 17	-	PM2.5	24-Hour	29 µg/m3	38.9 µg/m3	NA*	NA*	408778

* Wind data were not available on Jan 17 due to a frozen wind system.

The cause for the exceedance was because of stagnant weather conditions. The stagnant episode was marked by sustained low wind speeds which restrained the dispersion of pollutants causing them to become built-up in the area.

Monitoring Notes during the Month of January 2023

- **NMHC Canister Sampling Program - Volatile Organic Compounds (VOCs)**
 - The canister sampling program collects a 1-hour sample of air when the continuously measured non-methane hydrocarbon (NMHC) concentration reaches a specified trigger point. The current trigger point is 0.3 ppm for non-methane hydrocarbons. The trigger point is based on real-time monitoring data that are averaged over a 5-minute period.
 - One canister was collected at the Reno-B station this month, on January 5 at 06:45, at concentration of 0.39ppm.

- **Passive Polycyclic Aromatic Compounds (PACs) Sampling Program**
 - The PAC sampling program began in December 2019, and is designed to collect a 2-month integrated sample.
 - The sample media for sampling period of January and February were installed on January 10. They are scheduled to be replaced by the end of February.

- **Passives H₂S, SO₂ Sampling Program**
 - The passive sample filters were installed at the stations on December 30 and were removed on February 1.

Revisions to Alberta's Ambient Air Quality Data Warehouse

No revisions to historical data previously submitted to the Alberta's Ambient Air Quality Data Warehouse were made this month.

Deviations from Authorized Monitoring Methods
