

February 2023: Active Monitoring Program

Field Operations Summary (detailed field operations notes can be found in the monthly technical reports on the PRAMP [website](#))

986-C Station

- Measured parameters were below Alberta Ambient Air Quality Objectives (AAQOs) where applicable.
- The following parameters did not meet the 90% uptime requirement: Relative Humidity (0.0%), and Ambient Temperature (50.9%). The RH/AT probe failed on January 14 due to a broken connector. Troubleshooting commenced on February 1 and February 13. The RH/AT sensor probe was replaced on February 14; valid AT data resumed at hour 18, however, the RH issue could not be resolved. The RH/AT sensor probe was replaced again in March to correct the issue. Six hundred seventy-two and three hundred thirty hours of downtime for the RH channel and AT channel were recorded, respectively.

842-B Station

- No major operational issues this month that resulted in reportable downtime events. Measured parameters were below Alberta Ambient Air Quality Objectives (AAQOs) where applicable.

Reno-B Station

- No major operational issues this month that resulted in reportable downtime events. Measured parameters were below Alberta Ambient Air Quality Objectives (AAQOs) where applicable.

PRC Station

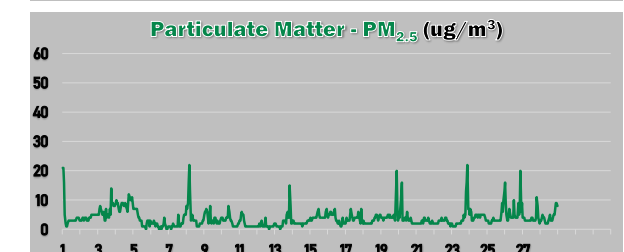

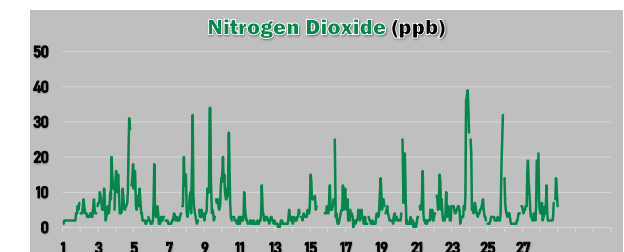

- No major operational issues this month that resulted in reportable downtime events. Measured parameters were below Alberta Ambient Air Quality Objectives (AAQOs) where applicable.

AQHI Station - Grimshaw

- No major operational issues this month that resulted in reportable downtime events. Measured parameters were below Alberta Ambient Air Quality Objectives (AAQOs) where applicable.

NMHCs Canister Sampling Program

- No canisters were collected.

February 2023: Active Monitoring Program

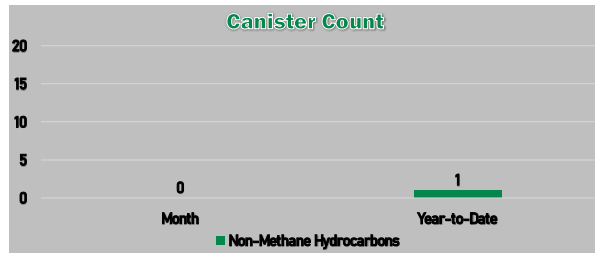

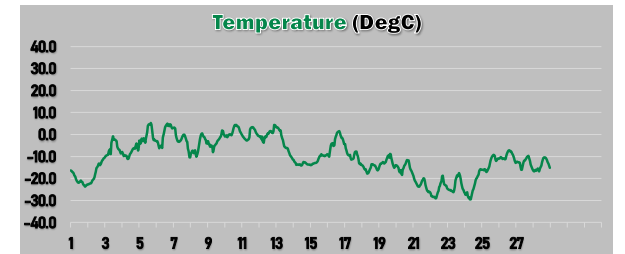

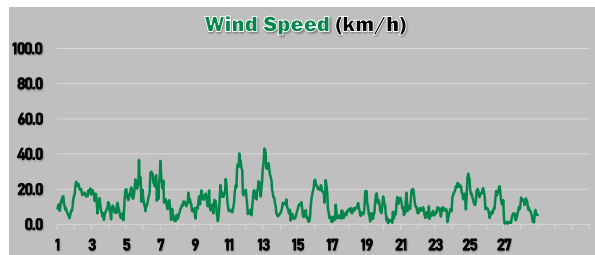

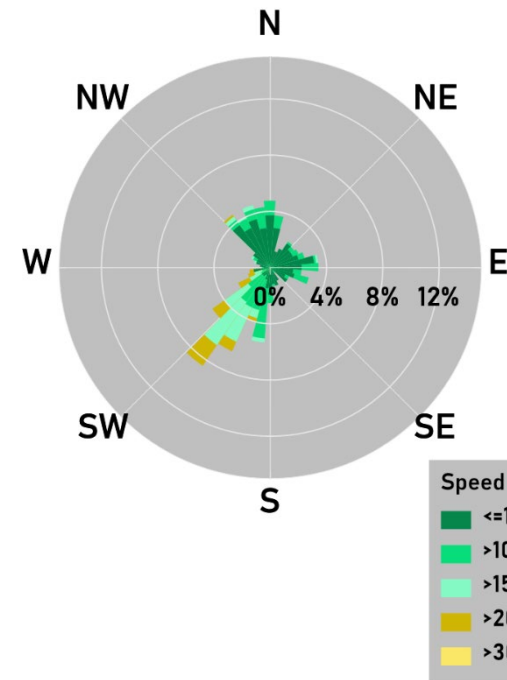

Station 986-C

Station 842-B

Reno-B Station

PRC Station

AQHI Station - Grimshaw

Targets, Guidelines, and Objectives
 Sulphur Dioxide 1h AAAQO = 172 ppb
 Ozone 1h AAAQO = 76 ppb
 Particulate Matter (PM_{2.5}) 1h AAAQO = 80 ug/m³
 Nitrogen Dioxide 1h AAAQO = 159 ppb
 Operational Uptime Requirement = 90%
 AQHI Risk Value = 1-3 Low, 4-6 Moderate, 7-10 High, >10 Very High
