RE: 2023 Annual Ambient Air Quality Monitoring Report -PRAMP Airshed

Enclosed is the *2023 Annual Ambient Air Quality Monitoring Report* for the continuous ambient air quality monitoring stations of the Peace River Area Monitoring Program (PRAMP) Airshed regional air quality monitoring network, as operated in the year 2023.

The representative of the Person Responsible for this monitoring program is:

PRAMP Airshed
Michael Bisaga / Lily Lin, Technical Program Managers
Suite 91, 305 – 4625 Varsity Drive NW
Calgary, AB, T3A 0Z9
Phone #: 780-226-7068 / 587-225-2248
E-mail: pramptech@prampairshed.ca

This report was prepared by Lily Lin and reviewed by Mike Bisaga of PRAMP Airshed.

PRAMP Airshed has retained the services of Bureau Veritas to conduct continuous ambient monitoring on its behalf.

Listing of Continuous Monitoring Stations and Integrated Sampling Stations

The PRAMP continuous ambient air quality monitoring network stations are:

- 986-C Station
- 842-B Station
- Reno (Reno-B) Station
- PRC Station
- AQHI Grimshaw Station

Calibration Report and Data Submission

Hourly data and calibration reports for 2023 were submitted to Alberta's Ambient Air Data Warehouse for all stations. Data Qualifier Flags used in the monthly reports are summarized below.

Flag	Description	Instrument is operational?	Hour is valid?
P	Power failure	No	No
X	Machine malfunction / recovery	No	No
Y	Maintenance	Yes (unless otherwise noted)	No
K	Recording system failure	No	No
ND	Instrument not in service	No	No
NRM	Repeat quality assurance checks	Yes	No
C	Calibration	Yes	No
S	Daily zero/span	Yes	No
Q	Quality assurance	Yes	No

Major Operations and Maintenance Events at Continuous Monitoring Stations During 2023

986-C Station:

- There were no exceedances of the AAAQOs at the 986-C Station in 2023.
- **RH/AT:**
 - High RH values were recorded, starting in late December 2022. The probe was examined and cleaned on January 5, but it had only a temporary effect on readings. On January 12, the Rotronic HC2-S3 RH/AT sensor, s/n: 20357528, was removed, and the Rotronic HC2-S3 RH/AT sensor, s/n: 60837897, was installed. RH data were reviewed and discarded if readings were recorded near or at 100%. The RH/AT probe failed on January 14 due to a broken connector. Troubleshooting commenced on February 1 hour 17 and February 13 at hour 17. The Rotronic HC2-S3 RH/AT sensor, s/n: 60837897, was reinstalled on February 14. Valid AT data resumed February 1 at hour 18. However, the RH issue could not be resolved. The RH/AT sensor probe was replaced in March to correct the issue. and three hundred thirty hours of downtime for the RH channel and AT channel were recorded, respectively. except RH (0.0%), AT (50.9%) Data collected between January 14 and January 31 were discarded. Forty-six hours, six hundred seventy-two hours and six hundred seventy-two of RH data recorded in December 2022, January 2023 and February 2023 were invalidated due to this issue. Operational uptime was 93.8%, 6.9% and 0.0%, respectively. Four hundred seventeen hours and three hundred twenty-six hours of AT data collected in January and February 2023 were invalidated. Operational uptime was 43.8% and 50.9%, respectively.
 - On March 2, the Rotronic HC2-S3, s/n: 60837897, sensor, was removed, and the Rotronic HC2-S3, s/n: 20626912, sensor was installed. This sensor was replaced to correct the faulty RH probe issue. Forty-one hours of downtime were recorded.
- **Precipitation:**
 - The precipitation gauge was found to be non-functional; the tipping bucket and drain holes were blocked by ice on January 12. The problem could not be corrected during the visit with the equipment available. Data were invalidated back to the last valid value, which was December 28, 2022 hour 7, to January 14 hour 21 before a valid reading started being recorded. Eighty-nine hours of data collected in December 2022 were discarded.
 - The precipitation gauge was found to be non-functional; the tipping bucket and drain holes were blocked by ice on February 2. The problem could not be corrected during the visit as ambient temperatures were too low to allow the system to be de-iced. Data were invalidated back to the last known good value, which was January 23 hour 11, to February 3 hour 22 before a valid reading started being recorded. With the data which were discarded between January 01 and January 12 due to issues that was identified on January 12, a total of five hundred thirty-nine hours of data collected in January were discarded. Seventy-one hours of data collected in February were discarded as well. This correction did not affect the dataset in the ETS system as the precipitation parameter is not included in the PRAMP's required monitoring plan. The monitoring activity was conducted to provide data for the near-by residents use. Operational uptime for January and February were 27.6% and 89.4%, respectively.
- **THC/CH4/NMHC:**
 - The PRAMP-owned Teledyne T701H, s/n: 468, failed on May 5 following a brief power outage. A BV-supplied API T701, s/n: 80, was installed on May 7. Forty-six hours of downtime were recorded due to this event.
 - The Thermo 55i, s/n: 1433563261, failed the shut-down calibration due to frequent injection issues on July 5. The analyzer was removed, and the Thermo 55i, s/n: 1022143392, was

installed. One-minute data were reviewed and discarded if data quality was affected by injection issues. Two hours of data collected on July 1 were invalidated as a result.

- On November 7, BV's Thermo 55i analyzer, s/n: 1022143392, was removed and replaced by PRAMP's Thermo 55i analyzer, s/n: 12208316589. The newly installed analyzer was allowed time to stabilize overnight. A successful installation calibration was complete don November 8. Twenty-one hours of downtime were recorded due to this event.
- **SO2:** The expected zero value was entered incorrectly on July 7. The error was corrected on July 15. As a result, the value was not used for the baseline correction between July 7 and 15.
- **TRS:** The TRS convertor failed to recover after June 7's power outage. On June 9, the BV's CD Nova CDN101 convertor, s/n: 552, was removed, and the PRAMP's CD Nova CDN101 convertor, s/n: 530, was installed. Forty-five hours of downtime were recorded due to this event.

842-B Station:

- There were no exceedances of the AAAQOs at the 842-B Station in 2023.
- **Precipitation:** The precipitation gauge was found to be non-functional; the tipping bucket and drain holes were blocked by ice on February 14. The system was de-iced and tested to show correct function on February 14. Data were invalidated back to the last known good value, which was February 10 hour 15, to February 14 hour 11 the issue was corrected. Ninety-five hours of data collected were discarded.
- **THC/CH4/NMHC:**
 - Due to multiple bad injection events, the analyzer failed the shut-down calibrations on both April 3 and April 24. The Thermo 55i HC analyzer, s/n: 12208316589, was removed on April 25, and the Thermo 55i HC analyzer, s/n: 1314057759, was installed on April 26. A successful installation calibration was completed on April 27. A total of one hundred and five hours of downtime were recorded due to these events. Operational uptime was 85.4%. **EPA reference #: 413785.**
 - On November 8, BV's Thermo 55i analyzer, s/n: 1314057759, was removed and replaced by PRAMP's Thermo 55i analyzer, s/n: 1501663728. The newly installed analyzer was allowed time to stabilize overnight. A successful installation calibration was complete don November 9. Nineteen hours of downtime were recorded due to this event.
- **BP:** Due to a configuration error dating back to the urgent logger swap on August 10, data collected between August 11 hour 12 and August 21 hour 6 were invalid and were discarded. Two hundred thirty-five hours of downtime were recorded. Operational uptime was 61.7%.
- **Datalogger:**
 - The PRAMP's Envista Ultimate datalogger, s/n: 510, failed on August 9 due to a major hardware failure. The logger was replaced with the BV's Envista Ultimate datalogger, s/n: AC1400000208, on August 10. The system was back online on August 11. Forty-one hours of downtime were recorded.
 - On November 17, BV's Ultimate datalogger, s/n: ACI0000208, was removed, and PRAMP's Ultimate datalogger, s/n: ACL1000105, was installed following maintenance / testing. One hour of downtime was recorded due to this event.

Reno (Reno-B) Station:

- There were no exceedances of the AAAQOs at the Reno Station in 2023.
- **Precipitation:** The precipitation gauge was found to be non-functional on January 6; the tipping bucket and drain holes were blocked by ice. The problem could not be corrected during the visit with the equipment available. The precipitation gauge was de-iced and successfully tested to show correct function on January 17. Data were invalidated back to the last valid value, which was December 30, 2022 hour 12. Thirty-six and three hundred ninety-seven hours of data collected in December 2022 and January 2023 were discarded, respectively. Operational uptime for January 2023 was 46.4%.
- **THC/CH4/NMHC:**
 - To address bad injection issues, the PRAMP-owned Thermo 55i HC analyzer, s/n: 12101910497, was removed, and the BV-supplied Thermo 55i HC analyzer, s/n: 1505664392, was installed on January 17.
 - After a shut-down calibration on July 18, BV's Thermo 55i analyzer, s/n: 1505664392, was removed, and PRAMP's Thermo 55i analyzer, s/n: 12101910497, was installed. The analyzer was allowed time to stabilize overnight. A successful installation calibration was completed on July 19. Twenty hours of downtime were recorded due to this event.

PRC Station:

- There were no exceedances of the AAAQOs at the PRC Station in 2023.
- **THC/CH4/NMHC:** On April 18, the BV-supplied Thermo 55i HC analyzer, s/n: 1022143392, was removed, and the CNRL-owned Thermo 55i HC analyzer, s/n: 1034745845, was installed. One hour of downtime was recorded due to this event.
- **TRS:** The analyzer failed due to a failed converter on October 26. The CNRL's CD Nova CDN-101 convertor, s/n: 506, was replaced with BV's CD Nova CDN-101 convertor, s/n: 516 on October 31. The channel was brought back online after a successful post-repair calibration on November 2. Data were invalidated back to the last valid calibration check, which was October 25 hour 11. One hundred fifty-seven hours of downtime were recorded due to this event. Operational uptime was 73.4%. ***DINC 0002366.***
- **Datalogger:**
 - The PRAMP-owned Ultimate datalogger, s/n: ACK7004200, failed on January 3. The BV-supplied Ultimate datalogger, s/n: ACI4000637, was installed on January 5. Fifty-eight hours of data were lost due to this event.
 - On April 18, the BV-supplied Ultimate datalogger, s/n: ACI4000637, was removed, and the recently repaired PRAMP-owned Ultimate datalogger, s/n: ACK7004200, was installed. Two hours of downtime were recorded due to this event.
- **Station HVAC unit:** Between October 19 and October 26, the station's temperature rose due to issues with the HVAC system; this caused the temperatures to rise above the manufacturer's recommended/ EPA-designated operating ranges for most gas analyzers (US EPA designation for TRS, H2S and THC/CH4/NMHC < 35°C and for SO2 < 30 °C). Data quality collected during this period could have been affected by the issue and therefore were discarded. Forty-three of downtime were recorded as a result.

AQHI - Grimshaw Station:

- There were no exceedances of the AAQOs at the AQHI - Grimshaw Station, except PM2.5 and O3.
 - O3: Two 1-Hour exceedances of PM2.5 were recorded in 2023.

Date	Time (MST)	Parameter	Average Period	Concentration (ppb)	Wind speed (km/hr)	Wind Direction	Reference #
21-May	16	O3	1-Hour	77.4	8.2	148° (SE)	414771
21-May	17	O3	1-Hour	77.8	6	155° (SSE)	414771

- PM2.5:
 - Six hundred eighty-seven 1-Hour exceedances of PM2.5 were recorded in 2023.

- **TRS:**

- The Teledyne T100U analyzer, s/n:132, failed after a successful as-found points check on March 1. The BV supplied Thermo 42i-TLE analyzer, s/n: 1152940011, was installed followed by a successful installation calibration on March 2. Twenty-one hours of downtime were recorded due to this event.
- Following a successful shut-down calibration on May 3, the BV-supplied Thermo 43i-TLE analyzer, s/n: 1152940011, was removed, and the PRAMP-owned Teledyne T100U analyzer, s/n: 132, was installed.

- **THC/CH4/NMHC:** Due to multiple bad injection events, the analyzer failed the shut-down calibrations on April 4. Maintenance was performed on April 4, and the post-repair calibration was completed on April 5. Data recorded between April 1 and April 4 were reviewed and discarded if data quality was affected by injection issues. Twenty-nine hours of downtime were recorded due to this event. Persistent high NMHC values started being recorded on April 6. Maintenance was performed on April 7, and the post-repair calibration was completed on April 8. After reviewing the diagnostic records, it was determined that data collected from April 6 hour 11 to April 8 hour 7 were invalid and therefore were discarded. Forty-eight hours of downtime were recorded due to this event. Operational uptime was 89.3%. **EPA reference #: 413787.**

- **NOX/NO/NO2:**

- The analyzer failed both the daily zero-span check and the as-found points check on July 11. Maintenance/troubleshooting commenced which included cleaning the sample valve. The post repair calibration was successfully completed afterwards. In the absence of a clear point of failure, data were discarded back to the last valid calibration, which was July 10. Thirty-five hours of downtime were recorded. The analyzer was put offline on July 12 for 5 hours to check the zero-span system. With other events which led to an additional 30 hours of downtime, including the station HVAC failure and power outages, the operational uptime was 89.9%. **AEPA reference #: 417906.**
- A successful shut-down calibration was completed on PRAMP's Teledyne T200 analyzer, s/n: 837, on August 1. The analyzer was removed for maintenance. The BV's API 200E analyzer, s/n: 594, was installed afterwards. The analyzer was allowed time to stabilize overnight. A successful installation calibration was completed on August 2.
- On October 17, BV's API 200E analyzer, s/n: 594, was removed following a successful shut-down calibration, and PRAMP's Teledyne T200 analyzer, s/n: 837, was installed. The analyzer was allowed time to stabilize overnight. A successful installation calibration was completed on October 18. Twenty-one hours of downtime were recorded due to this activity.

- **O3:**

- PRAMP's Teledyne T400 analyzer, s/n: 824, failed the shut-down calibration on July 12 due to unstable/noisy readings. The analyzer also had a warning for lamp signal displayed on the screen. The analyzer was removed, and BV's Teledyne API 400A analyzer, s/n: 445, was installed and calibrated. In the absence of a clear point of failure, data were discarded back to the last valid multi-point calibration check, which was June 8. Five hundred forty-two hours of data collected in July and two hundred seventy-two hours of data collected in June were discarded. Operational uptime was 24.7% in June and 58.5% in July. **AEPA reference #: 417907.**

- On October 17, BV's API 400A analyzer, s/n: 445, was removed following a successful shut-down calibration, and PRAMP's Teledyne T400 analyzer, s/n: 824, was installed. The analyzer was allowed time to stabilize. A successful installation calibration was completed on October 19. Forty-six hours of downtime were recorded due to this activity.
- Station HVAC unit:** The compressor in the HVAC unit failed on September 10. The station temperatures subsequently rose above the manufacturer's recommended/ EPA designated operating temperature ranges for most gas analyzers (EPA designation for NO_x/NO/NO₂, H₂S and THC/CH₄/NMHC < 35°C and for SO₂ and O₃ < 30 °C) between September 10 and September 12 and between September 15 and September 18. Data quality collected during this period could have been affected by the issue and therefore were discarded. One hundred and ten hours of downtime were recorded in September as a result. Operational uptime was 84.7%. **AEPA reference #: 420864.** Based on the manufacturer's specification for PM_{2.5} (T640 analyzer), the acceptable operation temperature range is 4 °C - 50°C. Data quality was not affected by the high shelter temperatures. Data were considered valid.
- AQHI values:**
 - Due to the O₃ instrument issue, which was identified on July 12, data were discarded back to June 8. As O₃ is one of the parameters used to calculate the AQHI value, the AQHI values during this period were affected. However, considering ambient air and wildfires conditions around the Peace River region this season, PM_{2.5} was predominant parameter driving the AQHI values. As a result, AQHI values were not discarded and were kept for *reference use*.
 - Due to the HVAC unit issue, the quality of data collected by most gas analyzers between September 10 and September 12 and between September 15 and September 18 were affected and were invalidated. As NO₂, O₃ and PM_{2.5} are the parameters used to calculate the AQHI value, the AQHI values during this period were affected. However, considering that that 1) although elevated, the station temperature was still within the operating range of the PM_{2.5} instrument, and 2) wildfires in and around the PRAMP region led to elevated PM_{2.5} concentrations, PM_{2.5} was the predominant parameter driving the AQHI values during the time the HVAC unit failed. As a result, AQHI values were not discarded and were kept for *reference use*.

Passive Monitoring Summary

12 multi-parameter passive stations were used around the PRC station. These stations monitored both SO₂ and H₂S. Passive samples, including blanks were handled and deployed in accordance with the AMD. Analyses of the passive samples were performed by Bureau Veritas Canada. The full results of these analyses were submitted to ETS in accordance with the AMD.

NMHC Canister Events

A multi-year integrated sampling program continued operating at 986-C station, 842-B station, Reno station and Reno-B station; this program collects air samples using Silco/Summa Canisters which are analyzed in a laboratory for VOCs, reduced sulphur compounds, and methane isotopes. In 2023, the program collected a 1-hour sample of air in a canister when the continuously measured non-methane hydrocarbon (NMHC) concentration reached a specified trigger point. The trigger point was 0.3 ppm. The trigger point was based on real-time monitoring data that were averaged over a 5-minute period. Analysis of these samples were performed by InnoTech Alberta. Analytical results were included in the monthly integrated sampling reports following the month of sample collections.

The canister sampling program was temporarily paused between May 8 and May 30 and between July 8 and July 31 due to wildfire smokes. Intense wildfire smoke in the region caused NMHC concentrations to spike, resulting in PRAMP's canister systems being automatically activated to collect samples. The objective of the PRAMP canister program is to provide data and information about ambient hydrocarbon concentrations from local industrial sources. Collecting samples triggered by wildfire smoke is not within the intended scope of this component of the regional monitoring program. Therefore, the canister sampling program was paused pending dissipation of wildfire smoke and an improvement in air quality conditions.

A total of 9 non-methane canister samples were collected in 2023.

29-Sept	19:35	Reno-B	0.32

Note: The canister system at the Reno-B station was deactivated on July 8, but it was activated automatically after a power outage on July 10. Due to wildfires that caused the NMHC concentrations to become elevated, the canister system was triggered and sample was collected on July 11.

Notification of Changes Made After Monthly Report Issuance

During the 2023 annual data review, it was noticed that the wind speed data collected at the AQHI-Grimshaw station on February 1, 2023 hour 14 was reported incorreced; instead of 3.6 km/hr, 93 km/hr was reported. The error was corrected on January 17, 2024. Hourly dataset of wind speed for February 2023 was submitted to ETS on January 17, 2024. (ETS Request #: 4633197).

During the 2023 annual data review, it was noticed that THC data collected on December 26 hour 3 at the 986-C station was incorrect. The data was revised, and the revised dataset was submitted to ETS on March 27, 2024. (ETS Request #: 4659019).

During the 2023 annual data review, it was noticed that THC/CH4/NMHC data collected on March 11 hour 11 and December 30 hour 11 at the PRC station were incorrect. The data were revised, and the revised dataset was submitted to ETS on March 27, 2024. (ETS Request #: 4659037 and #4659095, respectively).

Deviations from Authorized Monitoring Methods

Reno Station: The scheduled daily zero-span check for all gas parameters did not execute correctly on April 2 at hour 10. During the next regularly scheduled zero-span check on April 3, the system self-corrected and executed properly. Therefore, troubleshooting could not be performed, and the root cause could not be determined. This was an isolated incident that did not repeat.

2.0 Continuous Monitoring 14- Year Charts (2010 – 2023) of Annual Average Concentrations

Only data collected at the 986-C, 842-B, Reno-B and PRC stations are included in this long-term data study. As the AQHI portable monitoring station only collects data at one location for maximum of 24-months period, they do not provide enough data for long-term trend study; therefore, they are excluded from this section.
